

Speech Language & Swallowing Therapy

Did you know?

Speech language and swallowing therapy is focused on evaluation and treatment for individuals who have disorders from resulting neurological issues, vocal impairment, head and neck cancer, and traumatic brain injury and more.

Diagnoses that are often associated with speech therapy include:

- Aphasia
- Apraxia
- Voice Disorders
- Traumatic Brain Injury
- Language Development
- Cognition
- Dementia
- Dysarthria
- Dysphagia
- Head and Neck Cancer

Speech therapy can be a key element in improving an individual's overall quality of living. Our expert team of speech pathologists are trained to evaluate and treat difficulty or inability with:

- Memory Loss
- Swallowing or Eating
- Slurred Speech
- Following Directions
- Problem Solving
- Understanding or Processing Information

We proudly provide individualized, one-on-one treatment from pediatrics to geriatrics.

We track and provide functional outcome scores to ensure we are providing the best quality therapy for those we serve.

making *life* better.
